

August 7, 2014

**Dear Honorary Members of the Royal Swedish Academy of Sciences,**

I am pleased to inform The Royal Swedish Academy of Sciences and the whole scientific community, that our revolutionary research in theoretical physics entitled “**Armenian Theory of Special Relativity**” has been published as a book and as a short communication article in the following places:

- a) Yerevan State University Uniprint, Armenia, in June 2013 (full version 98 pages), which you can download from here [https://archive.org/details/arm\\_odm\\_book](https://archive.org/details/arm_odm_book)
- b) IJRSTP, Vol. 1, Issue 1, Pages 36-42 (2014), which you can download from here [http://www.ijrstp.us/uploads/1/3/4/5/13455174/ijrstp\\_inaugural\\_issue\\_2.pdf](http://www.ijrstp.us/uploads/1/3/4/5/13455174/ijrstp_inaugural_issue_2.pdf)
- c) Infinite Energy, Vol. 20, Issue 115, Pages 40-42 (2014), which you can download full issue from here [http://www.armeniantheory.com/atfiles/arm\\_odm/pdf/InfiniteEnergy115.pdf](http://www.armeniantheory.com/atfiles/arm_odm/pdf/InfiniteEnergy115.pdf)

In our main research-manuscript we have succeeded to build a mathematically solid theory of relativity in one dimension for homogeneous and anisotropic time-space continuum and received many amazing relativistic formulas, **which is an unambiguous generalization of the Lorentz transformation equations and Lorentz relativistic formulas**. Our article is the accumulation of all efforts from physicists to build more general transformation equations of relativity in one dimension.

It is worth to mention that Lorentz transformation equations and all other Lorentz relativistic formulas can be obtained from the Armenian Theory of Special Relativity as a particular case, by substituting  $s = 0$  and  $g = -1$ .

We are also pleased to announce that our new article entitled “**Armenian Theory of Special Relativity Illustrated**”, which must be published very soon (this year), uncovers all hidden and sacred features of our new theory.

Till now due to extreme dogmatism, the properties of time-space asymmetry and all physical quantities asymmetric transformations are never “officially” studied. The role of symmetry violations in physics is not understood by physicists at all. That is where the Armenian Theory of Special Relativity comes to play, which explains all of these “impossible violations” and brings to question all physical laws of legacy hard science and demands a revision under these remarkable new circumstances.

For example NASA’s earlier program (between 1996 and 2003 years) called “**Breakthrough Propulsion Physics**” failed because they didn’t have more precise relativistic formulas. The same happened with DARPA’s “**Casimir Effect Enhancement program**” when trying to harness the Casimir force in a vacuum and using that energy to power a propulsion system. They didn’t succeed either because of the same reason - they did not have the more general and precise quantum mechanics theory and equations.

The time is right to reopen NASA’s BPP program and DARPA’s Casimir program, but this time using everywhere existing our aether asymmetric momentum force formula and Armenian energy - momentum formulas.

In my humble opinion, using Armenian Theory of Special Relativity and its promising Armenian relativistic formulas - all that work can be done within two to three years, **which will bring forth the dawn of a new technological era**.

We can harness infinite energy from the rest particle's asymmetric momentum-force just as we are harnessing energy from the wind using a windmill.

Dear Honorary members of the Royal Swedish Academy of Sciences, I have enough courage and knowledge to ask you to consider our original research and published articles as a base for nomination for the **Nobel Prize in Physics 2015 – 100<sup>th</sup> anniversary of the Armenian genocide**.

As you can see from our articles, which are attached also to this email, we are a few steps away from constructing a unified field theory, **which can change the face of modern theoretical physics as we know it now**. But the final stage of the UFT construction will come after we finish the **Armenian Theory of Special Relativity in three dimensions**.

Our published manuscripts create a paradigm for advance studies in relativistic kinematics and relativistic dynamics. Crown jewels of our new theory - **Armenian energy and momentum formulas, which the world has never seen before**, have unpredictable applications in applied physics. For example, by manipulating the time-space constants *s* and *g* (particularly in chemical or in thermal environment), we can obtain numerous mind blowing and fascinating practical results.

Furthermore Armenian momentum formula for rest particle - **is the key formula for the future**, which shows how we can build unified field theory and how we can unleash unlimited and clean free energy from a vacuum.

Dear friends, please address all correspondence concerning our research and published manuscripts to **Physics Department, Yerevan State University** and feel free to correspond with me by the following E-mail address as well ([robert@armeniantheory.com](mailto:robert@armeniantheory.com)).

Thank you for your consideration of our scientific research and I hope you will find it a significant achievement in Theoretical Physics, which everyone has been waiting for so long!

**100 years of inquisition in physics is now over and Aether Energy Age has begun!**

Sincerely,

**Robert Nazaryan**
